

Data Analysis in Excel

Pre-requisites

Hope you have gone through the self-learning content for this session on the PRISM portal.

By the End of This Session:

- You shall learn the fundamentals of Statistical Analysis.
- You shall understand the various measures of central tendency and the measures of spread.
- You will learn how to perform various types of analysis using the above measures.
- You will learn to create and analyze pivot tables.

What Have We Learned So Far?

- Fundamentals of Excel
- Multiple components of the Excel toolbar
- Use of Formula Bar
- Creating dynamic formulae using cell references and cell range
- Using and manipulating cell name ranges
- Multiple ways of formatting rows, columns and datatypes
- Variety of functions for text and date columns

Introduction to Statistical Analysis

Introduction to Statistics

Statistics is the science of collecting, analyzing, interpreting, and presenting data.

Real-world Application of Statistics

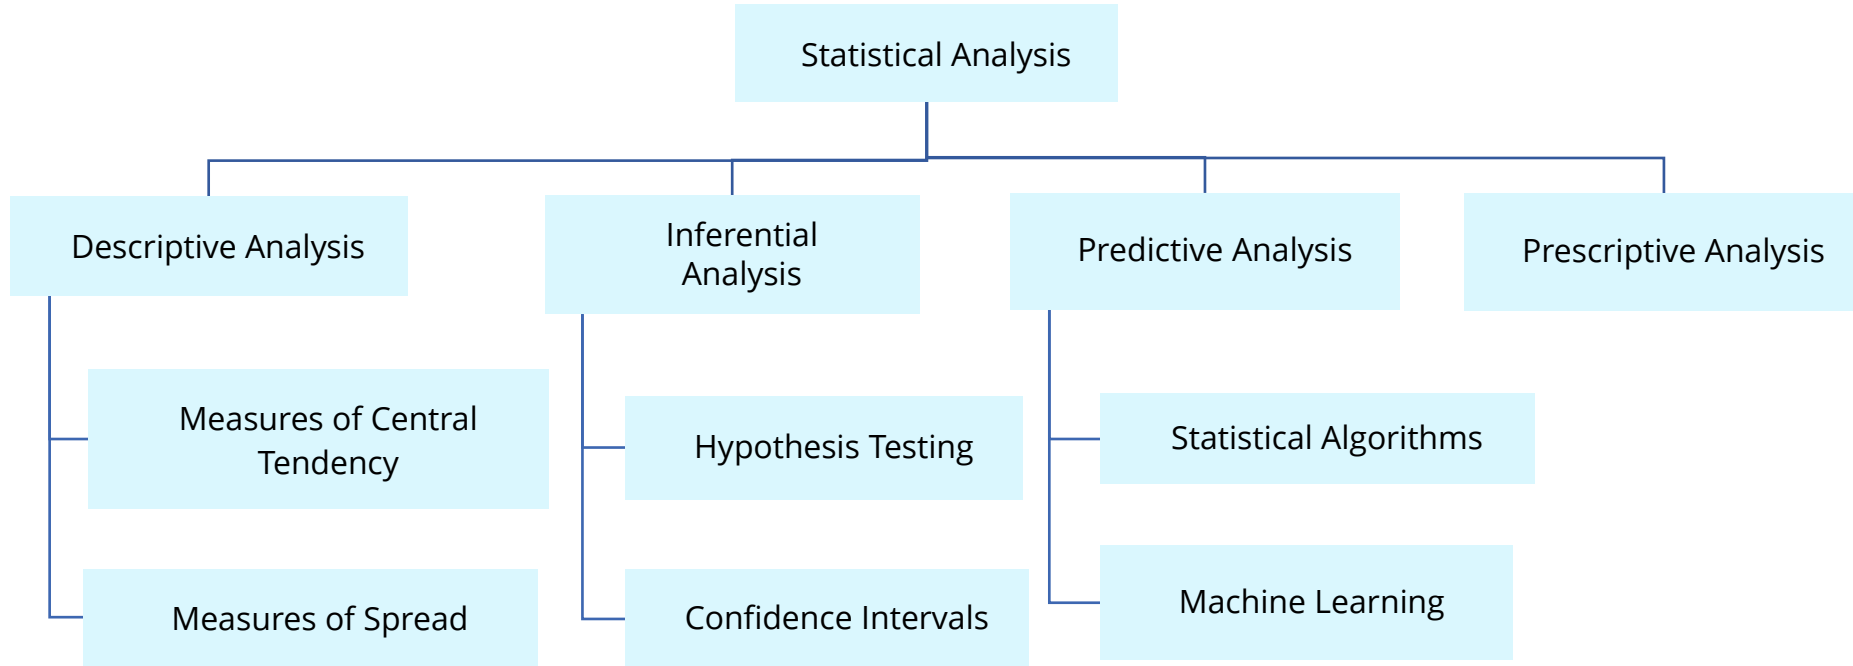

Design and analyze clinical trials to determine the effectiveness of new drugs.

Analyze survey data to understand consumer preferences, market trends, and customer satisfaction.

Types of Statistical Analysis

Poll Time

Q. How would you categorize the process of forecasting the flight demand for the next 2 weeks for an airline?

- a. Descriptive Analysis
- b. Prescriptive Analysis
- c. Inferential Analysis
- d. Predictive Analysis

Poll Time

Q. How would you categorize the process of forecasting the flight demand for the next 2 weeks for an airline?

- a. Descriptive Analysis
- b. Prescriptive Analysis
- c. Inferential Analysis
- d. Predictive Analysis**

Measures of Central Tendencies

Measures of Central Tendencies

Measures of central tendency summarize the center or average value of a dataset.

Mean

Median

Mode

Introduction to Mean

- Mean is defined as the average value of a collection of numbers.
- It considers all values equally.
- It is sensitive to extreme values in the data.

$$\text{Mean} = \frac{\text{Sum of Values}}{\text{Count of Values}}$$

Introduction to Median

- The median is the middle value of a dataset when arranged in ascending or descending order.
- It represents the 50th percentile value of a dataset.
- Unlike the mean, the median is not sensitive to outliers.

[10, 3, 5, 2, 8, 1, 7]

[1, 2, 3, 5, 7, 8, 10]

[1, 2, 3, **5**, 7, 8, 10]

Introduction to Mode

- The mode is the value that appears most frequently in the dataset.
- A dataset can have no mode (no value appears more than once) or multiple modes (multiple values appear with the same frequency).
- Mode is generally used in the case of discrete or categorical columns.

[a, b, a, c, d, a, b, d]

a: 3
b: 2
c: 1
d: 2

a

Hands-on – Measures of Central Tendency in Excel

Poll Time

Q. We use the median to summarize the values in a column that contains outliers or extreme values. Is this True or False?

- a. True
- b. False
- c. Depends on the use-case

Poll Time

Q. We use the median to summarize the values in a column that contains outliers or extreme values. Is this True or False?

- a. **True**
- b. False
- c. Depends on the use-case

Measures of Spread

Introduction to Range

- The range is the simplest measure of spread.
- It is calculated by subtracting the minimum value from the maximum value in the dataset.
- The range gives an idea of the spread but is influenced by outliers.

Introduction to Interquartile Range

- The IQR is a measure that focuses on the middle 50% of the data.
- It is calculated as the difference between the third quartile (Q3) and the first quartile (Q1) of the dataset.
- The IQR is resistant to outliers and provides a measure of variability within the central portion of the data.

Introduction to Standard Deviation

- The Standard Deviation measures the average deviation of a data point from its mean.
- Standard Deviation = Square root of Variance.
- Standard Deviation is influenced by outliers and provides a more detailed measure of dispersion.

$$\text{Standard Deviation} = \sqrt{\frac{\text{Sum of squared deviations from the mean}}{(\text{Number of observations} - 1)}}$$

Poll Time

Q. Which of the following is not true about IQR?

- a. IQR is not affected by outliers
- b. IQR is the difference between Q2 and Q1
- c. IQR is the difference between Q3 and Q1
- d. IQR is a measure of spread

Poll Time

Q. Which of the following is not true about IQR?

- a. IQR is not affected by outliers
- b. IQR is the difference between Q2 and Q1**
- c. IQR is the difference between Q3 and Q1
- d. IQR is a measure of spread

Hands-on – Calculating Range, IQR, and SD

Exercise

Using the insurance data perform the below analysis:

- Find out the most frequent age of the customers.
- Calculate the standard deviation in the premiums paid by the customers of the above age group.
- Determine the difference in the average premiums between male and female customers.

Poll Time

Q. Which measure of spread provides a measure of variability within the central portion of the data?

- a. Range
- b. IQR
- c. Variance
- d. Standard Deviation

Poll Time

Q. Which measure of spread provides a measure of variability within the central portion of the data?

- a. Range
- b. IQR**
- c. Variance
- d. Standard Deviation

Other Functions in Excel

Introduction to Dependent Dropdown List

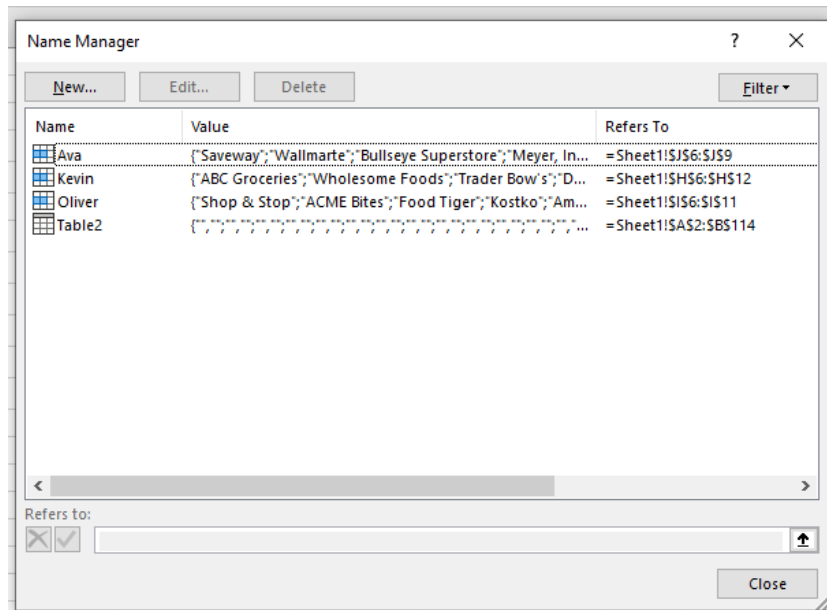

- Dependent dropdown lists in Excel allow you to create a dynamic selection process based on the values chosen in a previous dropdown.
- This is useful when you have related or hierarchical data that you want to organize and select from.

Creating a Dependent Dropdown List

Step 1: Set up the Data

Customers	Sales Person		
	Kevin	Oliver	Ava
	ABC Groceries	Shop & Stop	Saveway
	Wholesome Foods	ACME Bites	Wallmarte
	Trader Bow's	Food Tiger	Bullseye Superstore
	Discount Foods	Kostko	Meyer, Inc.
	ALDO	Amazone	
	Mini Food Stores	Dollar Captain	
	Pam's Club		

Step 2: Create Name Ranges

Creating a Dependent Dropdown List

Step 3: Create the First Dropdown

The screenshot shows an Excel spreadsheet with columns A through L. In column A, cell A1 contains a dropdown menu labeled 'Sales Person'. In column B, cell B1 contains a dropdown menu labeled 'Customer'. A Data Validation dialog box is open, showing the 'Settings' tab. The 'Validation criteria' section is set to 'List', with 'Ignore blank' and 'In-cell dropdown' checked. The 'Source' is set to '\$J\$6:\$L\$6'. The 'Apply these changes to all other cells with the same settings' checkbox is unchecked. The background shows a data table with 'Sales Person' as the header and 'Customers' as the row header.

Sales Person		
Kevin	Oliver	Ava
ABC Groceries	Shop & Stop	Saveway
Wholesome Foods	ACME Bites	Wallmarte
Trader Bow's	Food Tiger	Bullseye Superstore
Discount Foods	Kostko	Meyer, Inc.
ALDO	Amazon	
Mini Food Stores	Dollar Captain	
Pam's Club		

Creating a Dependent Dropdown List

Step 4: Create the Second Dropdown

The screenshot shows an Excel spreadsheet with a dependent dropdown list. The 'Sales Person' dropdown in cell A1 is set to 'Oliver'. The 'Customer' dropdown in cell B1 is currently empty. The Data Validation dialog box is open for cell B2, showing the 'Settings' tab. The 'Allow' type is 'List', and the 'Source' is '=INDIRECT(\$A\$2)'. The 'Ignore blank' and 'In-cell dropdown' options are checked. The background table shows the following data:

Sales Person		
Kevin	Oliver	Ava
ABC Groceries	Shop & Stop	Saveway
Wholesome Foods	ACME Bites	Wallmarte
Trader Bow's	Food Tiger	Bullseye Superstore
Discount Foods	Kostko	Meyer, Inc.
ALDO	Amazone	
Mini Food Stores	Dollar Captain	
Pam's Club		

Poll Time

Q. Which of the below function is used to create a dependent dropdown list?

- a. Unique()
- b. Concatenate()
- c. Direct()
- d. Indirect()

Poll Time

Q. Which of the below function is used to create a dependent dropdown list?

- a. Unique()
- b. Concatenate()
- c. Direct()
- d. Indirect()**

Introduction to Filters in Excel

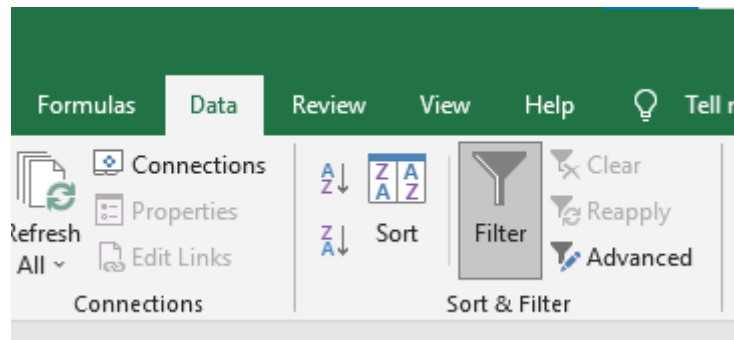

- Filtering in Excel allows you to quickly analyze and manipulate data by displaying only the information you need.
- Filters help you sort and narrow down data based on specific criteria.

Using Filters

Step 1: Select the Data

	A	B	C	D	E	F	G
1	age	sex	bmi	children	smoker	region	expenses
2	19	female	27.9	0	yes	southwest	16884.9
3	18	male	33.8	1	no	southeast	1725.55
4	28	male	33	3	no	southeast	4449.46
5	33	male	22.7	0	no	northwest	21984.5
6	32	male	28.9	0	no	northwest	3866.86
7	31	female	25.7	0	no	southeast	3756.62
8	46	female	33.4	1	no	southeast	8240.59
9	37	female	27.7	3	no	northwest	7281.51
10	37	male	29.8	2	no	northeast	6406.41
11	60	female	25.8	0	no	northwest	28923.1

Step 2: Apply the Filter

Using Filters

Step 3: Filter the column

D	E	F	G
children	smoker	region	expenses
			16884.9
			1725.55
			4449.46
			21984.5
			3866.86
			3756.62
			8240.59
			7281.51
			6406.41
			28923.1
			2721.32
			27808.7
			1826.84

Pivot Tables in Excel

Introduction to Pivot Tables in Excel

- Pivot tables in Excel allow you to summarize and analyze large amounts of data quickly and efficiently.
- They provide a flexible and powerful tool for data analysis and reporting.

Example of Pivot Table Analysis

Smoking Rate across Age Groups

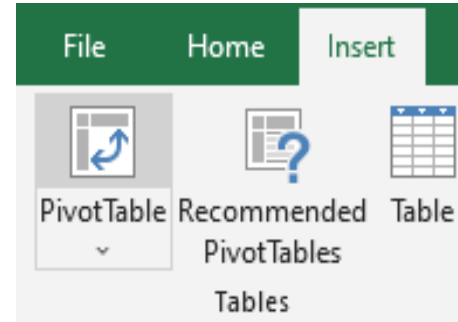

Count of People		Smoker		
Age		no	yes	Grand Total
18		57	12	69
19		50	18	68
20		20	9	29
21		26	2	28
22		22	6	28
23		21	7	28
24		22	6	28
25		23	5	28
26		25	3	28
27		19	9	28
28		25	3	28
29		21	6	27
30		18	9	27
31		22	5	27
32		21	5	26
33		20	6	26
34		21	5	26
35		20	5	25

How to Perform Pivot Table Analysis

Step 1: Select the Data

	A	B	C	D	E	F	G
1	age	sex	bmi	children	smoker	region	expenses
2	19	female	27.9	0	yes	southwest	16884.9
3	18	male	33.8	1	no	southeast	1725.55
4	28	male	33	3	no	southeast	4449.46
5	33	male	22.7	0	no	northwest	21984.5
6	32	male	28.9	0	no	northwest	3866.86
7	31	female	25.7	0	no	southeast	3756.62
8	46	female	33.4	1	no	southeast	8240.59
9	37	female	27.7	3	no	northwest	7281.51
10	37	male	29.8	2	no	northeast	6406.41
11	60	female	25.8	0	no	northwest	28923.1

Step 2: Create a Pivot Table

How to Perform Pivot Table Analysis

Step 3: Choose the Destination

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P
1	age	sex	bmi	children	smoke	region	expenses									
2	19	female	27.9	0	yes	southwest	16884.9									
3	18	male	33.8	1	no	southeast	1725.55									
4	28	male	33	3	no	southeast	4449.46									
5	33	male	22.7	0	no	northwest	21984.5									
6	32	male	28.9	0	no	northwest	3866.86									
7	31	female	25.7	0	no	southeast	3756.62									
8	46	female	33.4	1	no	southeast	8240.59									
9	37	female	27.7	3	no	northwest	7281.51									
10	37	male	29.8	2	no	northeast	6406.41									
11	60	female	25.8	0	no	northwest	28923.1									
12	25	male	26.2	0	no	northeast	2721.32									
13	62	female	26.3	0	yes	southeast	27808.7									
14	23	male	34.4	0	no	southwest	1826.84									
15	56	female	39.8	0	no	southeast	11090.7									
16	27	male	42.1	0	yes	southeast	39611.8									
17	19	male	24.6	1	no	northwest	1837.24									
18	52	female	30.8	1	no	northeast	10797.3									
19	23	male	23.8	0	no	northeast	2395.17									
20	56	male	40.3	0	no	southwest	10602.4									
21	30	male	35.3	0	yes	southwest	36837.5									
22	60	female	36	0	no	northeast	13228.9									

PivotTable from table or range

Select a table or range

Table/Range:

Choose where you want the PivotTable to be placed

☒ New Worksheet

☐ Existing Worksheet

Location:

Choose whether you want to analyze multiple tables

☐ Add this data to the Data Model

OK Cancel

How to Perform Pivot Table Analysis

Step 4: Designing the Pivot Table

The screenshot shows the 'PivotTable Fields' task pane. At the top, it says 'Choose fields to add to report:' with a search bar. Below this, a list of fields is shown with checkboxes: 'age' (checked), 'sex' (checked), 'bmi' (unchecked), 'children' (unchecked), 'smoker' (checked), and 'region' (unchecked). Below the list, it says 'Drag fields between areas below:'. There are four areas: 'Filters' (empty), 'Columns' (containing 'smoker'), 'Rows' (containing 'age'), and 'Values' (containing 'Count of People').

Step 6: Customize the Pivot Table

Count of People		Smoker		
Age		no	yes	Grand Total
18		57	12	69
19		50	18	68
20		20	9	29
21		26	2	28
22		22	6	28
23		21	7	28
24		22	6	28
25		23	5	28
26		25	3	28
27		19	9	28
28		25	3	28
29		21	6	27
30		18	9	27
31		22	5	27
32		21	5	26
33		20	6	26
34		21	5	26
35		20	5	25

Hands-on: Conducting Data Analysis in Excel

Poll Time

Q. Which of the following shelves are not a part of the Pivot Table window?

- a. Cell
- b. Column
- c. Value
- d. Row

Poll Time

Q. Which of the following shelves are not a part of the Pivot Table window?

- a. **Cell**
- b. Column
- c. Value
- d. Row

Summary

Central tendency summarizes the center or average value of a dataset.

Measures of Spread quantify the variability or spread of values in a dataset.

Dependent dropdown lists are useful when you have related or hierarchical data that you want to organize and select from.

Filters help you sort, and narrow down data based on specific criteria.

Pivot Tables allow you to summarize and analyze large amounts of data quickly and efficiently.

Activity 1

Pre-requisites:

- MS Excel
- WorkOrders.xlsx

Scenario:

You have been given an Excel file containing details for several work orders taken up by a company. Perform the following analysis on the given dataset:

- Create a new table that contains the valid number of technicians allowed for each service type, as shown below.

Service Type				
Assess	Deliver	Install	Repair	Replace
1	1	1	1	1
2	2	2	2	2
		3	3	

Activity 2

Pre-requisites:

- MS Excel
- WorkOrders.xlsx

Scenario:

You have been given an Excel file containing details for several work orders taken up by a company. Perform the following analysis on the given dataset:

- Using the table created in the previous activity, create named ranges for each service type such that each range contains the respective technician counts.

Activity 3

Pre-requisites:

- MS Excel
- WorkOrders.xlsx

Scenario:

You have been given an Excel file containing details for several work orders taken up by a company. Perform the following analysis on the given dataset:

- Create a data validation over the existing “Techs” column such that the value in each row is as per the structure defined in the table created in activity 1.

Activity 4

Pre-requisites:

- MS Excel
- WorkOrders.xlsx

Scenario:

You have been given an Excel file containing details for several work orders taken up by a company. Perform the following analysis on the given dataset:

- Create a pivot table that contains the total revenue and count of services done across all service categories for various technician counts.

Next Session:

Mastering Advanced Excel: Macros, Data Validation, and Dashboard Creation

THANK YOU

Please complete your assessments and review the self-learning content for this session on the **PRISM** portal.

Mastering Advanced Excel: Macros, Data Validation, and Dashboard Creation

Pre-requisites

Hope you have gone through the self-learning content for this session on the PRISM portal.

By the End of This Session:

- You shall automate repetitive Excel tasks using macros.
- You shall learn the fundamentals of VBA to modify, debug and write macros.
- You will set constraints on your raw data.
- You will create informative dashboards to summarize your analysis.

What Have We Learned So Far?

- We've understood the fundamentals of Statistical Analysis.
- We've learned the various measures of central tendency and the measures of spread.
- We've learned the use of dependent dropdown lists.
- We've learned the use of filters in Excel.
- We've learned to create and use pivot tables to analyze raw data.

Poll Time

Q. Which of the following options accurately describes dependent dropdown lists in Excel?

- a. Dropdown lists that rely on external data sources
- b. Dropdown lists that automatically update based on the user's input
- c. Dropdown lists that dynamically change based on the selection in another dropdown
- d. Dropdown lists that display values randomly selected from a list

Poll Time

Q. Which of the following options accurately describes dependent dropdown lists in Excel?

- a. Dropdown lists that rely on external data sources
- b. Dropdown lists that automatically update based on the user's input
- c. Dropdown lists that dynamically change based on the selection in another dropdown**
- d. Dropdown lists that display values randomly selected from a list

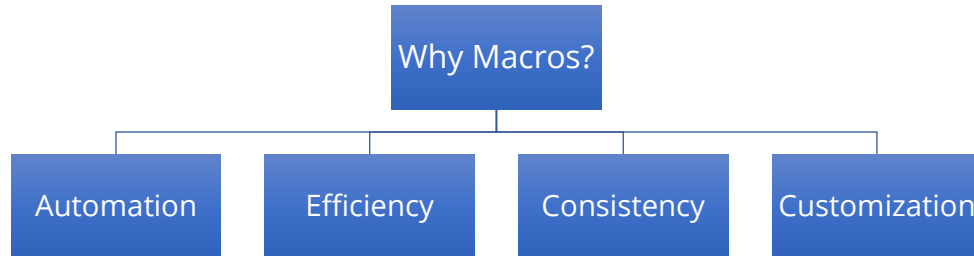

Macros and VBA

Introduction to Macros and VBA

- A macro is a set of instructions or code that automates tasks in Excel.
- It allows you to record and replay a series of actions, making repetitive tasks faster and more efficient.
- Macros can be created using the built-in Macro Recorder or by writing VBA code (Visual Basic for Applications).

Use Case of Macros

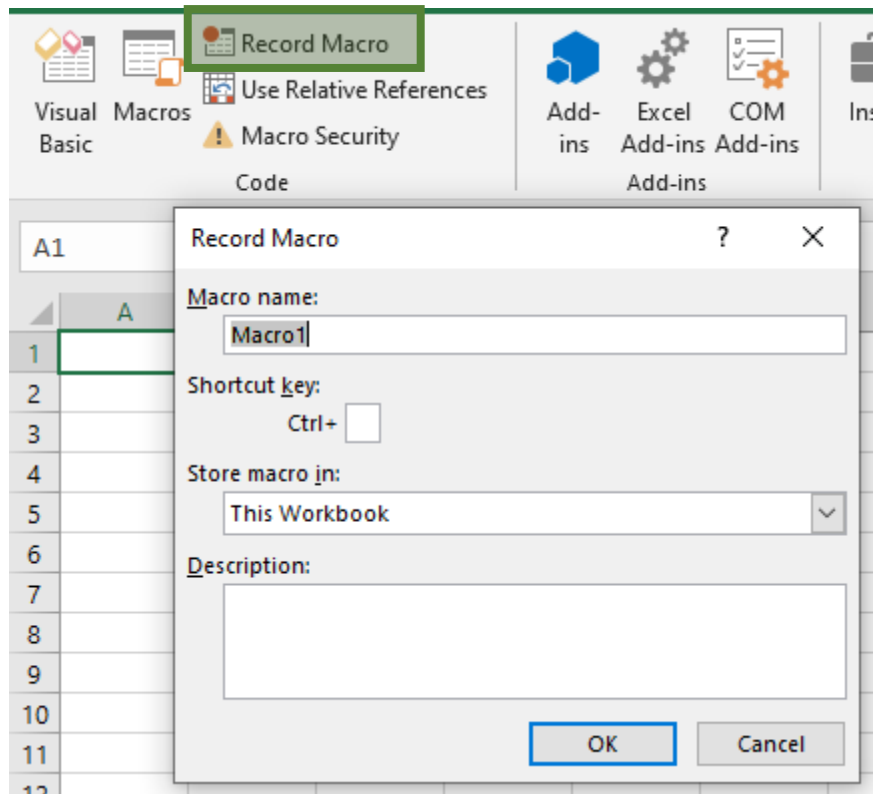

Recording Macros

Step 1: Enable the Developer Tab

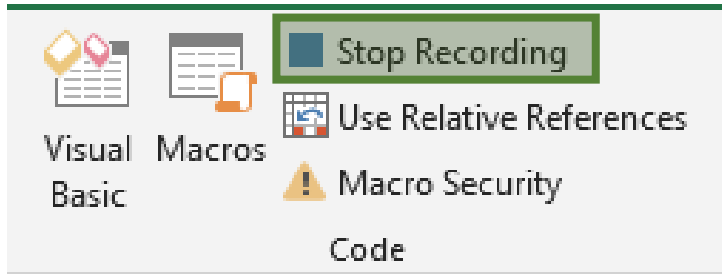

Recording Macros

Step 2: Click on Record Macro button

Recording Macros

Step 3: Click on Stop Recording once done

Pop Quiz

Q. Which of the following macro techniques in Excel allows you to write and customize VBA code for creating advanced automation and functionality?

- a. Macro Recording
- b. Macro Execution
- c. Macro Debugging
- d. Custom Macro Creation

Hands-on: Writing and Debugging a Simple VBA Code

Advanced Data Validation

Introduction to Advanced Data Validation

- Data validation is a feature in Excel that helps control and restrict the type of data that can be entered into a cell.
- It ensures data accuracy, consistency, and integrity by setting specific rules and criteria for data entry.

Creating dependent dropdown lists using data validation.

Using formulas in data validation rules for dynamic validation.

Applying data validation across multiple worksheets or workbooks.

Using Formulas in Data Validation Rules

Data Validation

Insert the custom formula in the "Formula" box.

Pop Quiz

Q. Which of the following Excel formulas can be used for creating formula-based data validation?

- a. =AVERAGE()
- b. =VLOOKUP()
- c. =COUNTIF()
- d. =SUM()

Pop Quiz

Q. Which of the following Excel formulas can be used for creating formula-based data validation?

- a. =AVERAGE()
- b. =VLOOKUP()
- c. =COUNTIF()**
- d. =SUM()

Hands-on - Using Formulas in Validation Rules

Poll Time

Q. Which of the following statements accurately describes the purpose of data validation in Excel?

- a. Data validation ensures data encryption and security in Excel files
- b. Data validation helps in generating random data for statistical analysis in Excel
- c. Data validation restricts and validates the type and values entered into cells in Excel
- d. Data validation automatically calculates and summarizes data in Excel spreadsheets

Poll Time

Q. Which of the following statements accurately describes the purpose of data validation in Excel?

- a. Data validation ensures data encryption and security in Excel files
- b. Data validation helps in generating random data for statistical analysis in Excel
- c. Data validation restricts and validates the type and values entered into cells in Excel**
- d. Data validation automatically calculates and summarizes data in Excel spreadsheets

Exercise

In the “Work Order” dataset, create a formula-based data validation in the PartsCost column to allow only positive values in the column.

PartsCost 
\$90.04
\$35.10
\$832.16
\$938.00
\$240.00
\$120.00
\$341.00
\$155.39
\$204.28
\$535.62
\$43.26

Poll Time

Q. Which of the following Excel formulas is used to count the number of cells in a range that meet criteria?

- a. =COUNTIF()
- b. =COUNT()
- c. =SUMIF()
- d. =SUM()

Poll Time

Q. Which of the following Excel formulas is used to count the number of cells in a range that meet criteria?

- a. **=COUNTIF()**
- b. =COUNT()
- c. =SUMIF()
- d. =SUM()

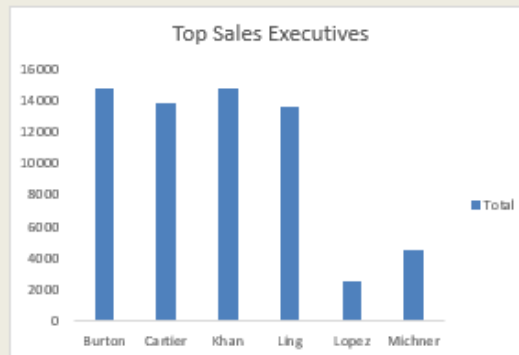

Introduction to Excel Dashboards

Introduction to Excel Dashboards

- A dashboard is a visual representation of data that provides a comprehensive overview of key information.
- In Excel, a dashboard is created by consolidating and presenting data in a visually appealing and interactive format.

Hands-on – Building Dashboards

Pop Quiz

Q. Which of the following data validation techniques in Excel allows you to create a dropdown list of options based on values from another range?

- a. Whole number validation
- b. Text length validation
- c. List validation
- d. Date/Time validation

Pop Quiz

Q. Which of the following data validation techniques in Excel allows you to create a dropdown list of options based on values from another range?

- a. Whole number validation
- b. Text length validation
- c. List validation**
- d. Date/Time validation

Summary

We understood the use of Macros and VBA in automating repetitive tasks in excel.

We learnt some advanced data validation techniques such as dependent dropdown lists and formula-based data validation.

We created a dashboard to sum up our analysis and present it in a concise manner.

Activity 1

Pre-requisites:

- MS Excel
- Insurance.xlsx

Scenario:

You are given an Excel file containing insurance premiums for multiple customers.

Record a macro while performing the following analysis on the dataset:

- Create a new column called **Total Insured**, which contains the total number of people covered under each policy.
- Calculate the premium paid per head by dividing the **Expense** column and the **Total Insured** column.

Activity 2

Pre-requisites:

- MS Excel
- Insurance.xlsx

Scenario:

You are given an Excel file containing insurance premiums for multiple customers.

Create the below-mentioned data validation on the respective columns:

- Ensure that the Age of customers lies between 18 – 80.
- Ensure that the gender column contains one of **male**, **female**, and **others**.
- Ensure that the BMI and expenses columns contain positive values.
- Ensure that the smoker column contains either a **yes** or a **no**.

Activity 3

Pre-requisites:

- MS Excel
- Insurance.xlsx

Scenario:

You are given an Excel file containing insurance premiums for multiple customers.

Create a dashboard that contains the following charts:

- Line chart depicting the relation between the average premium per head and age.
- Bar chart containing the fraction of male and female population who smoke.
- Pie chart depicting the count of people who smoke in each region.

Session Feedback

Next Session:
Excel Case Study

THANK YOU
